// Day 9 of 10

Day 9

10 DSA Tips

Developers make these every day.
Don't be one of them.

→ Swipe through all 10

Mistake #01

Master Time Complexity First

Can't optimize what you can't measure

```
// Bad
// Writing solutions without thinking
// about time & space complexity first

// Good
O(1)     → HashMap lookup
O(log n) → Binary Search
O(n)     → Single loop
O(n2)    → Nested loops — avoid!
```

💡 Always state complexity after solving

Mistake #02

HashMap Solves Most Problems

Reduces O(n2) to O(n) often

```
// Bad
for(int i=0;i// Good
Set seen = new HashSet<>();
for(int x : arr){
  if(seen.contains(x)) return true;
  seen.add(x);
} // O(n)
```

💡 When you see 'find/check', think HashMap
